

ABSTRACT OF THE DISCLOSURE

5 A telephone mouthpiece and earpiece cover system for helping
protect a user from contact from germs on a telephone. The system
includes an earpiece cover attachment and a mouthpiece cover
attachment. The earpiece cover attachment comprises a base
having a plurality of holes extending therethrough. The front
10 surface of the base of the earpiece attachment has an annular lip
extending around the outer perimeter of the base of the earpiece
cover attachment. The back surface of the base of the earpiece
cover attachment has a perimeter wall defining a space adapted for
inserting the earpiece of a telephone therein. The mouthpiece cover
15 attachment comprises a top with a plurality of apertures extending
therethrough. The back surface of the top of the mouthpiece cover
attachment has an annular wall, which defines a space adapted for
inserting a mouthpiece of a telephone therein.
